**King, Inc. Debuts Industry's First Dual-Function Mulch Spreading Trailer
*Mulch King® makes mulching a one-man operation***

(Cleveland, Ohio) – King, Inc. introduces the revolutionary Mulch King® landscaping trailer at the Ohio Landscape Association's WinterGreen Expo & Conference held at Cleveland's IX Center. Unlike similar trailers, Mulch King is a mulch spreader equipped with a 4000 CFM high-capacity mulch blower that doubles as vacuum source for leaf pick up. The Mulch King also eliminates the need for an entire work crew as one man can spread up to 8 yards of evenly distributed mulch per hour -- without the need for wheelbarrows or shovels.

Mulch King is designed to give small to mid-sized landscaping companies a competitive edge by:

Reducing labor – from a 4-man crew to a 1-man operation.

Increasing productivity – blows mulch evenly, right where it's needed, in less than 1/3 of the time.

Reducing waste – consistently distributes mulch evenly for greater conservation, saving up to 25% in material costs.

““What once was an all-day, labor-intensive project that required an entire work crew can be accomplished quickly -- by one man, in less than one third of the time,” explained King, Inc. president, Bill Kapper. “That means the landscaping company has the resources to bid on more jobs and the owner has a viable means to grow their business. Quite simply, it's a smart investment that can pay for itself in just one season.”

Unlike its competitors, all parts on the Mulch King come standard. Backed by a

Lifetime Limited Warranty, Mulch King is available in 4-, 8-, 12-yard models and can be towed by any full-size ½-ton truck.

About King, Inc.

King, Inc. is a provider of prototype development, engineering support and high-tech machining. Working with some of the most recognized brands in the global marketplace, King, Inc. builds, tests and assembles automation equipment for aerospace, medical, plastics, hydraulics, bearings, motorsports and landscaping industries. The company's services run the gamut from developing complex medical parts to specialized motorsports components to massive energy-efficient prototype parts to complete turnkey manufacturing.
